ABOUT ME

As a Computer Science undergraduate, I offer a unique combination of technical discipline and professional reliability. I am exceptionally good at full-stack development, with a proven ability to lead diverse teams and take projects from initial concept to a fully functional reality. Beyond my technical skills, my background in corporate internships and university projects has made me adept at delivering high-quality results under pressure. I am a proactive, dependable team member committed to the long-term success and excellence of every project I undertake.

PROJECTS

Kuddles: Full Stack Mobile Application (Ongoing)

Currently developing a mobile application that connects working parents with nannies, providing real-time updates on a child's daily activities, routines, and well-being.

- Technologies Used: React Native, Node.js, Express.js, MongoDB, Firebase

Estate Agent: Web Application

A comprehensive mobile solution designed to streamline property listings and client management. The app allows agents to manage portfolios on the go while providing buyers with advanced filtering, virtual tours, and direct inquiry channels.

- Technologies Used: React Native

Traffic Management System

Description: Developed a Python-based traffic management system that reads and processes real-world CSV traffic data to display organised, actionable outputs.

- Technologies Used: Python, CSV module, File Handling

Sustainable Development Goals (SDG) Website

Description: Created a fully-functional, responsive website focused on the United Nations Sustainable Development Goal (SDGs) zero hunger.

- Technologies Used: HTML5, CSS3, JavaScript

EXTRA-CURRICULAR AND CO-CURRICULAR ACTIVITIES & SPECIAL ACHIVMENTS
